

# OXYJET LEO DELUXE

## THE ORIGINAL PULSED OXYGEN PRESSURE INJECTION

Made by NORA BODE GERMANY

# THE DEVELOPMENT

## OF THE OXYJET SYSTEM

**1986** the technician and naturopath Lothar Bode opened his practice together with his wife Jutta Bode, pharmacist and chemist. After a short period of time they began to specialize in the treatment of skin diseases, especially eczema and other inflammatory types.

**1989** Jutta and Lothar Bode set up the research institute IN.TACT. eV in Hohenstein under the scientific guidance of Prof. R. Gorges. The object was promoting research in the field of immune mediators in the skin. Several universities and colleges as well as firms with their expert knowledge and specialists took part in these research projects. During this research Lothar Bode developed a microscopic quick test to determine the quality of the intercellular spaces. It rapidly became clear that active substances could be inserted under pressure through the so called "Biomatrix". The OXYjet System is born.

**1994** Jutta and Lothar Bode founded the company NORA BODE Kosmetik. Also in that year a prototype of the OXYjet was developed, which inserts special cosmetic formulations and pure oxygen deep into the epidermis with the aid of pulsed oxygen. The development of special active ingredients for the treatment and the appropriate products for home-care was then intensely driven forward. The results of the treatment especially with dry, eczematous, atrophic skin finally resulted in the system being used cosmetically.

**1997** Lothar Bode was granted the patent for the pressure injection procedure by the German patent office in Munich. Scientific studies carried out by the Fraunhofer Institute for Biomedical Technology in St. Ingbert, Germany, confirmed the effectiveness of the original Bode OXYjet and at the same time resulted in definition of the treatment pressure. In the same year the first OXYjet models were launched on the German market.

**1998** and the following years were characterised by further developments in appliance technology, specialisation in the applied cosmetic formulations and launch of the system in neighbouring European countries and finally in Asia, USA and Russia.

**2003** The Daily Mirror reported that the Queen of Pop Madonna is having BEAUTY-TOX/OXYjet treatments in London and so the treatment was no longer a secret.

**2005 – 2010** The following years are marked by the development of further revolutionary news: The OXYjet Set – oxygen pressure injection for home appliance – now is the lifting sensation of celebrities in the whole world: The "body" Elle MacPherson, the German actresses Anja Kruse, Suzanne von Bor-sody, Jutta Speidel and Christine Neubauer swear on the Nora Bode oxygen pressure method. In the following years the multifunctional OXYjet STAR and the mobile OXYjet LEO are launched in the German and international market and both are powerful equipments built to the highest standards to meet the stringent demands of discerning clients. In 2007 the internationally renowned Institute Cornwall Dermatology Research, Peninsula Medical School, Truro, carries out a study which for the first time indicates the great importance of the original OXYjet in the medical application.

**2011:** The new CRYO2 treatment module turns out to be the optimal supplement to the needlefree pressure injection: Tingly cool freshness, pure oxygen and precious concentrates tighten the contours.

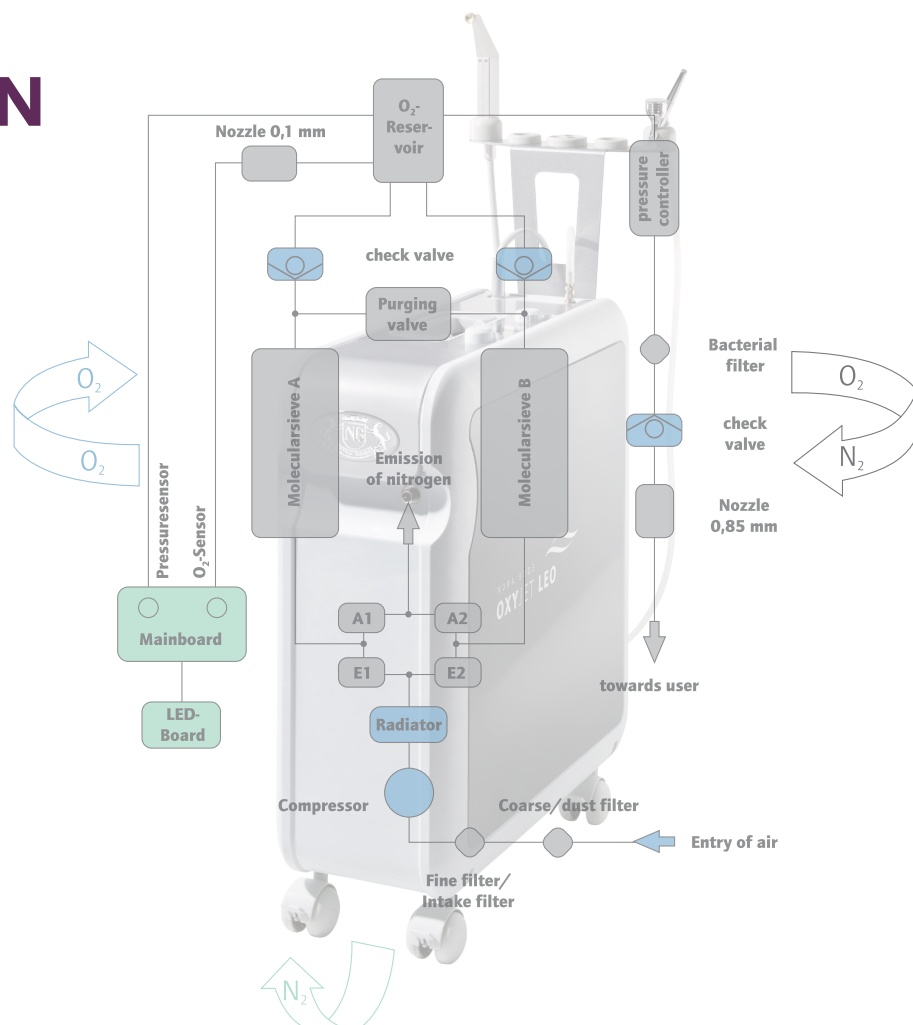

**2012:** Following the trend of compact, powerful multifunctional devices the three new OXYjet LEO models LEO, LEO cool and LEO de luxe are presented to the world of beauty and medicine.

**Experience, competence and innovation are our strengths!**

## 98% PURE OXYGEN CONCENTRATION

### The Technology

Based on oxygen generation technology the OXYjet concentrates the oxygen from the surrounding air. The air is made up of about 21 % oxygen and 78 % nitrogen, the remainder being made up of other gases. The OXYjet system draws in the surrounding air, purifying it through a series of filters, including two molecular sieve chambers. These sieve chambers separate the oxygen and the nitrogen molecules by their different sizes. The nitrogen is then removed, leaving only pure oxygen, which can be concentrated up to a maximum of 98 %.

# THE OXYJET LEO DELUXE

## THE ULTIMATE FACIAL TREATMENT

### **OXYclear:**

#### **The Oxygen-Deep Cleansing exfoliation**

- Concentrated oxygen is applied to the skin, this vitalises and acts effectively against irritations and impurities by its disinfecting action. In combination with OXYclear lotion the skin is cleansed deep into the pores.
- Bio Blue Light smoothes the impure and irritated skin, Bio Red Light stimulates the mature, atrophic skin.

### **OXYdiamond:**

#### **The Oxygen Diamond Peeling**

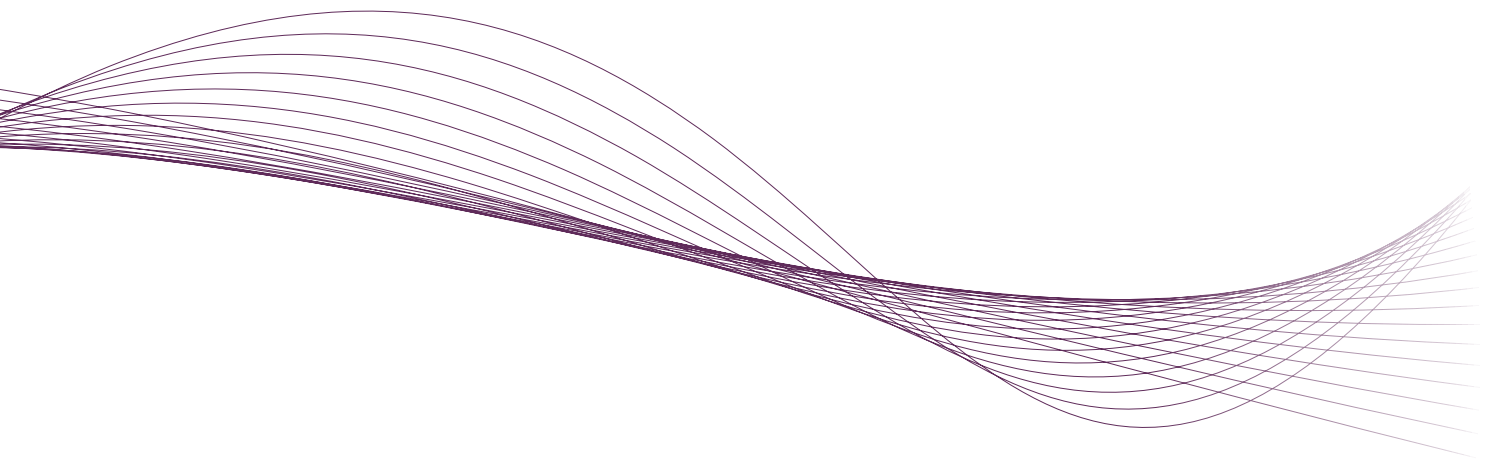

- Concentrated oxygen and diamond peel heads in different corn sizes remove cornifications and stimulate the skin.
- Cell division in the deeper layers of the epidermis is activated so that skin regains its youthful appearance time after time.

### **OXYjet:**

#### **The Pulsed Oxygen Pressure Injection:**

- Special cosmetic formulations and oxygen penetrate the epidermis by the appliance of high pulsed pressure and formulate a deposit of active ingredients in the deep layers of the skin. The skin appears smooth and firm, pigmentation disorders and impurities are reduced.
- The pulsed oxygen vitalises and energises the skin and makes it look fresh and healthy.

### **OXYtone disk:** The Oxygen Intensive Face Massage

- The special rotating massage disk intensively stimulates the subcutaneous fat tissue and by that supports the metabolism and the removal of the dissolved lipids – essential for the treatment of local fat deposits on face and neck in combination with the OXYjet Body Slim Treatment, e.g. a double chin.
- Bio Red Light penetrates deep into the subcutaneous tissue, stimulates the activity of the fat cells and by that helps to reduce the local fat deposits.
- Concentrated oxygen refreshes and vitalises the skin at the same time.

### **CRYO<sub>2</sub>:** The cool Oxygen Lifting

- A cool tingly fresh cocktail of coldness, oxygen and active ingredients is applied.
- Stimulating, cool pressure tightens the skin, reduces swellings and inflammations and together with synergistically acting oxygen cares for a fine pored, rosy tint with lifted contours.

### **OXYspray:** Oxygen Spray Treatment

- The gentle breeze of oxygen stimulates the skin's own immune system, reduces irritations after microdermabrasion or aggressive peelings and accelerates the wound healing.
- In combination with the special NORA BODE spray fluids skin is moisturised intensively, smoothed and refreshed.

The new OXYjet LEO models offer a variety of high-tech oxygen modules for the perfect treatment of face and body – without needles, gentle, effective and safe!

**OXYtone:**  
**The Oxygen**  
**Face Lift**

- The unique polyrotation head stimulates and tightens the muscles and the connective tissue of the skin. The face contours are visibly lifted. In combination with OXYtone serum eye bags are gently reduced.
- Concentrated oxygen refreshes and vitalises the skin at the same time.
- Depending on the skin's appearance Bio Blue Light smooths sensitive skin, Bio Red Light stimulates mature, atrophic skin.

**OXYjet LEO**

Operating voltage:	230/115 V, 50/60 Hz
Operating environment temperature:	10° bis 40° C
Power consumption:	350/400 W
Weight:	21 kg
Measurements:	54 x 20 x 52 cm
Warranty:	1 year

Flow setting:	von 0,2 bis 6 l/min.
Treatment pressure:	max. 2,2 bar
Oxygen performance:	bis 3 l/min. 95 % O <sub>2</sub> +/- 3 % bis 4 l/min. 85 % O <sub>2</sub> +/- 3 % bis 6 l/min. 75 % O <sub>2</sub> +/- 3 %

Safety Certification CE
